Experience

Senior Data Engineer | Plub — Jun 2025–Present

- Architect and operate multi-tenant **AWS Lakehouse platform** (S3, Glue, Athena, Lake Formation, Lambda) handling end-to-end enterprise analytics and reporting across multi-domain datasets.
- Design **scalable** Analytics Engineering workflows utilizing **dbt Core/Cloud** and **Apache Airflow** to standardize transformation pipelines, reducing data build friction and improving pipeline reliability.
- Build **MLOps** and automated **CI/CD deployment pipelines** using **CloudFormation**, **Terraform**, and **Docker** to automate infrastructure provisioning, model deployment steps, and environment lifecycle management
- Enforce zero-trust data governance and fine-grained access control (**LF-Tags/Lake Formation**) across production domains to ensure regulatory compliance and secure self-serve access.

Data Engineer | ITTI — Aug 2024–Jun 2025

- Engineered high-throughput event-driven data ingestion pipelines on **AWS Data Lake** to process asynchronous financial datasets (including Central Bank datasets) for **real-time** downstream integration.
- Automated **QuickSight reporting access & Lake Formation security policies**, standardizing federated access and reducing manual ticket overhead for analytics teams.
- Orchestrated distributed workflows with **Apache Airflow**, implementing custom monitoring and alerting to improve operational confidence and SLA compliance.

Data Engineer | Itaú Paraguay — Feb 2023–Aug 2024

- Architected **cloud data lake** infrastructure on AWS supporting high-visibility digital products (e.g., Pik and Tienda Naranja), ensuring high data availability for strategic initiatives.
- Led data **quality** and **governance** initiatives, creating automated validation scripts and stakeholder alignment around trusted dataset definitions.

Back-end Developer | Deriv — Jun 2022–Feb 2023

- Built **microservices** and core APIs for **high-concurrency** fintech applications with strict stability, security, and **low-latency** requirements.
- Implemented **KYC identity verification** and **regulatory compliance logic**, integrating automated fraud check workflows within financial domain regulations.

Skills

- **Data Engineering & Analytics:** Apache Airflow, dbt Core/Cloud, PySpark, Data Modeling (Dimensional/Vault), Data Quality, Data Governance
- **AWS Cloud Platform:** S3, Glue, Athena, AWS Lake Formation, Lambda, RDS, QuickSight, CloudFormation
- **Data Processing & Code:** Python, SQL, PySpark, PostgreSQL, MongoDB
- **DevOps / MLOps / IaC:** Docker, CI/CD (GitHub Actions), Terraform, CloudFormation, MLOps Pipelines
- **Languages:** Native/Fluent in English, Spanish, Portuguese

Education

Kansas State University: M.S. in Computer Science (2020) | B.S. in Computer Science (2018)
